- Gripping force
400 kN

LARGE DIAMETERS

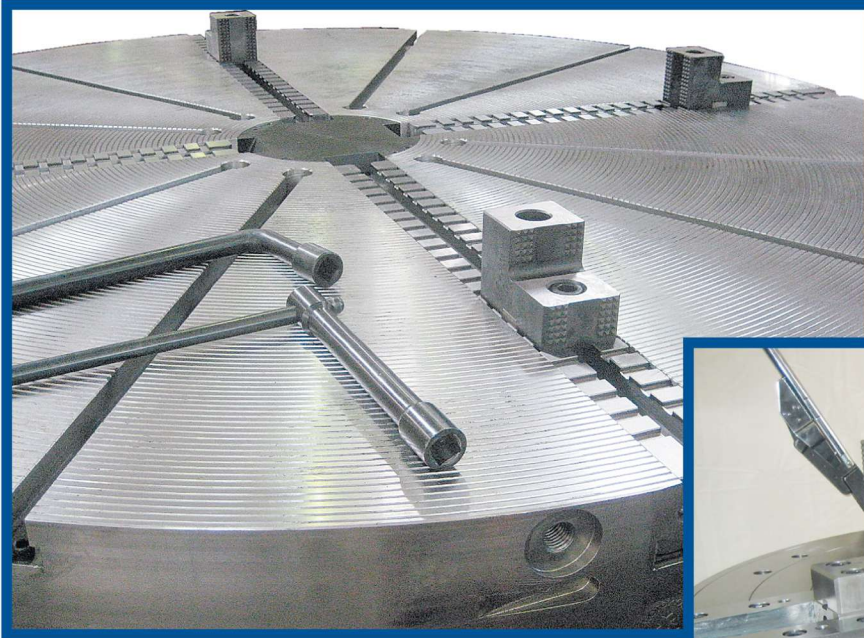

GD-M-4I

Strong clamping 4 manual independent jaws chuck

For clamping of large round, square, rectangular or irregular parts

- **Manual lubrication.** Lubrication and cleaning of all ways are assured by a number of manual connections (under control of the operator)

Standard equipment: 1 set 4-jaws for internal and external clamping

Optional devices

This type of GD MANUAL LARGE DIAMETER CHUCK can be arranged, on request, with following devices:

- **Protected guides** with oil wiper packing to eliminate impurities on jaw guide surface.
- **Torque multiplier.** High gripping force can be achieved with the option of a torque multiplier (to increase the torque applied to the operating screw)
- **Hydrostatic sustain** for micrometric centering
- For great power, made out of **FORGED MATERIAL**

On request we can study customized solutions. Non-binding data/sketches, subject to modifications or technical improvements
